

Header Menu

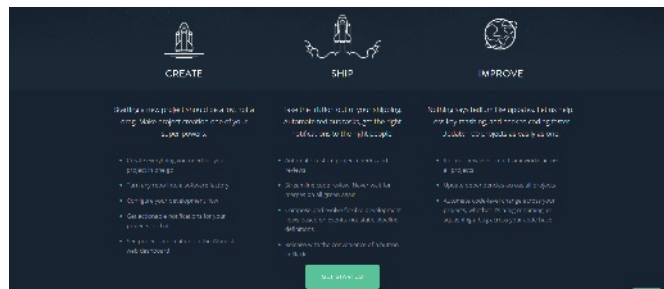

This menu is tricky as it folds in a burger menu when the screen size is small

Title Section

As I see it, not very difficult, only two levels of title and a button all centered

Description Section

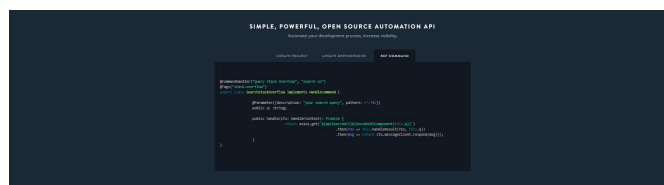

Harder : img + text + list on 3 columns which fold in one when the screen size is small + a button centered

Carousel Section

Is a Bootstrap carousel can do the stuff ?

Panes Section

Don't know if there is a bootstrap component for that. If not it will be Javascript...

Footer Menu

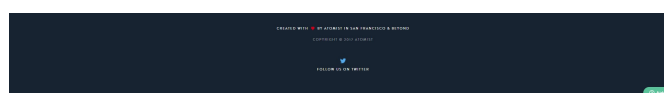

All centered. No trick.

Footer SignUp

All centered. No trick.

Footer

All centered. No trick.

This little text is floating all along the page
